No part of this publication may be reproduced or transmitted in any form or by any means, electronic or mechanical, including photocopy, recording, or any information storage and retrieval system, without permission in writing from the copyright owner.

The appearance of the code at the bottom of the first page of an article in this journal indicates the copyright owner's consent that copies of the article may be made for personal or internal use, or for the personal or internal use of specific clients. This consent is given on the condition, however, that the copier pay the stated per copy fee through the Copyright Clearance Center, Inc. (27 Congress Street, Salem, Massachusetts 01970), for copying beyond that permitted by Sections 107 or 108 of the U.S. Copyright Law. This consent does not extend to other kinds of copying, such as copying for general distribution, for advertising or promotional purposes, for creating new collective works, or for resale. Copy fees for pre-1990 articles are as shown on the article title pages; if no fee code appears on the title page, the copy fee is the same as for current articles.

This journal is printed on acid-free paper.

CONTENTS OF VOLUME 40

Number 1, July 1990

HIROKAZU KOMATSU, ANTHONY KOO, AND PAUL H. GUTH. Leukocyte Flow Dynamics in the Rat Liver Microcirculation 1

D. HARGREAVES, S. EGGINTON, AND O. HUDLICKÁ. Changes in Capillary Perfusion Induced by Different Patterns of Activity in Rat Skeletal Muscle 14

PAUL GASSER. Capillary Blood Cell Velocity in Finger Nailfold: Characteristics and Reproducibility of the Local Cold Response 29

C. E. RIVA, C. J. POURNARAS, C. L. POITRY-YAMATE, AND B. L. PETRIG. Rhythmic Changes in Velocity, Volume, and Flow of Blood in the Optic Nerve Head Tissue 36

MARCOS INTAGLIETTA, GREGORY A. BREIT, AND WILLIAM R. TOMPKINS. Four Window Differential Capillary Velocimetry 46

E.-S. COHEN-LAROQUE, J.-L. BÉNY, AND H. HUGGEL. Microvascular Effects of Bradykinin in the Isolated Perfused Guinea-Pig Hindbrain: Method and Characterization of a Possible Third Type of Bradykinin Receptor 55

C. G. ELLIS, O. MATHIEU-COSTELLO, R. F. POTTER, I. C. MACDONALD, AND A. C. GROOM. Effect of Sarcomere Length on Total Capillary Length in Skeletal Muscle: *In Vivo* Evidence for Longitudinal Stretching of Capillaries 63

SHANTI J. AGGARWAL, RUI DA COSTA, KENNETH R. DILLER, AND MELVIN J. HINICH. The Effects of Burn Injury on Vasoactivity in Hamster Peripheral Microcirculation 73

INGRID H. SARELIUS. An Analysis of Microcirculatory Flow Heterogeneity Using Measurements of Transit Time 88

E. E. SCHMIDT, I. C. MACDONALD, AND A. C. GROOM. Interactions of Leukocytes with Vessel Walls and with Other Blood Cells, Studied by High-Resolution Intravital Videomicroscopy of Spleen 99

KEVIN C. WARNKE AND THOMAS C. SKALAK. The Effects of Leukocytes on Blood Flow in a Model Skeletal Muscle Capillary Network 118

J. C. RUTLEDGE AND S. N. PAGAKIS. Extravascular Distribution of Low-Density Lipoprotein and Dextran in a High-Permeability State 137

TECHNICAL REPORT

JORGE BOCZKOWSKI, ERIC VICAUT, AND MICHEL AUBIER. A Preparation for *in Vivo* Study of the Diaphragmatic Microcirculation in the Rat 157

ANNOUNCEMENT 168

Number 2, September 1990

MATTHEW A. BOEGEHOLD AND THEODORE A. KOTCHEN. Arteriolar Network Morphology in Gracilis Muscle of Rats with Salt-Induced Hypertension 169

RUSSELL T. CARR AND LORI L. WICKHAM. Plasma Skimming in Serial Microvascular Bifurcations 179

IRVING G. JOSHUA. Endothelin-Induced Vasoconstriction of Small Resistance Vessels in the Microcirculation of the Rat Cremaster Muscle 191

DEEPA R. THEODORE, W. MEIER-RUGE, AND JACOB ABRAHAM. The Paradox of Increased Microvascular Visualization with Decreased Perfusion in Cerebral Focal Ischaemia in a Primate Model 199

EBBE STENDER HANSEN, KJELD SØBALLE, DORTHE KJØLSETH, TINE BRINK HENRIKSEN, AND SHU-ZHENG HE. Microvascular Hemodynamics in Experimental Arthritis: Disparity between the Distribution of Microspheres and Plasma Flow in Bone 206

YUAN YUAN AND BERNARD P. FLEMING. A Method for Isolation and Fluorescent Labeling of Rat Neutrophils for Intravital Microvascular Studies 218

MICHAEL R. POWERS AND DONALD R. BELL. Initial Equilibration of Albumin and IgG in Rabbit Hind Paw Skin and Lymph 230

LAURENCE T. BAXTER AND RAKESH K. JAIN. Transport of Fluid and Macromolecules in Tumors. II. Role of Heterogeneous Perfusion and Lymphatics 246

MARINA ZICHE, LUCIA MORBIDELLI, MARCO PACINI, PIERANGELO GEPPETTI, GIULIO ALESSANDRI, AND CARLO ALBERTO MAGGI. Substance P Stimulates Neovascularization *in Vivo* and Proliferation of Cultured Endothelial Cells 264

BRIEF COMMUNICATIONS

CYNTHIA L. STOKES, PAUL B. WEISZ, STUART K. WILLIAMS, AND DOUGLAS A. LAUFFENBURGER. Inhibition of Microvascular Endothelial Cell Migration by β-Cyclodextrin Tetradecasulfate and Hydrocortisone 279

SHIN WAKUI, MASAKUNI FURUSATO, MITSUGU TANAKA, WILLIAM C. ALLSBROOK, JR., YUTAKA KANO, AND SHINICHIRO USHIGOME. Endothelium and Pericyte Interdigitation: Pathway for Epidermal Growth Factor? 285

ANNOUNCEMENT 292

Number 3, November 1990

ULRICH HOFFMANN, AHMET YANAR, ULRICH K. FRANZECK, JAMES M. EDWARDS, AND ALFRED BOLLINGER. The Frequency Histogram—A New Method for the Evaluation of Laser Doppler Flux Motion 293

Junji Seki. Fiber-Optic Laser–Doppler Anemometer Microscope Developed for the Measurement of Microvascular Red Cell Velocity 302

Martin M. Lee, Peter B. Canham, and Robert M. Barr. Adhesive Interaction of Erythrocytes *in Vitro* in Multiple Myeloma 317

Cynthia H. Gemmell, Yale Nemerson, and Vincent Turitto. The Effects of Shear Rate on the Enzymatic Activity of the Tissue Factor–Factor VIIa Complex 327

S.-Z. Lin, N. Sposito, S. Pettersen, L. Rybacki, E. McKenna, K. Pettigrew, and J. Fenstermacher. Cerebral Capillary Bed Structure of Normotensive and Chronically Hypertensive Rats 341

Daekyung Kim, Piero M. Armenante, and Walter N. Durán. Mathematical Modeling of Mass Transfer in Microvascular Wall and Interstitial Space 358

M. Sugihara-Seki, T. W. Secomb, and R. Skalak. Two-Dimensional Analysis of Two-File Flow of Red Cells along Capillaries 379

William J. Federspiel. Use of Tracers to Measure Flow within Single Microvessels 394

R. F. Keep and H. C. Jones. Cortical Microvessels during Brain Development: A Morphometric Study in the Rat 412

Technical Report

A. S. Lossinsky, M. J. Song, R. Pluta, R. C. Moretz, and H. M. Wisniewski. Combined Conventional Transmission, Scanning, and High-Voltage Electron Microscopy of the Same Blood Vessel for the Study of Targeted Inflammatory Cells in Blood–Brain Barrier Inflammation 427

Brief Communication

Shih-Chieh Chen and Roger C. Wagner. Improved Detectability of Capillary Permeability Tracers by Electron Spectroscopic Imaging 439

Announcement 443

Information for Contributors

Microvascular Research (MVR) is an international journal dedicated to the dissemination of fundamental information related to the microvascular field.

Submission of Manuscripts. One original and two complete carbon copies should be sent via first-class mail, in flat form, to **Microvascular Research Editorial Office, Dr. David Shepro, 2 Cummington St., Boston University, Boston, Massachusetts 02215.** MVR will not be responsible for manuscripts lost in the mails.

Original papers only will be considered. Manuscripts are accepted for review with the understanding that the same work has not been and will not be nor is presently submitted elsewhere, and that its submission for publication has been approved by all of the authors and by the institution where the work was carried out; further, that any person cited as a source of personal communications has approved such citation. Written authorization may be required at the Editor's discretion. Articles and any other material published in *Microvascular Research* represent the opinions of the author(s) and should not be construed to reflect the opinions of the Editor(s) and the Publisher.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

Manuscript Style. Papers should be typewritten, double-spaced on one side of the paper, with wide margins. The manuscript should be divided into the following sections: Abstract, Introduction, Materials and Methods, Results, Discussion, References, and Acknowledgments. The abstract, which will precede each article, should be 225 words or less and should be typed on a separate sheet. In addition the manuscript should include, on separate pages, (1) the complete title with names of authors and affiliations (including ZIP CODE), (2) running title, consisting of no more than 40 characters including spaces, (3) key words that are suitable as **Index Descriptors,** and (4) the address to which proofs are to be mailed.

Tables. Tables are to be typed on separate sheets and numbered with Arabic numerals. Each table should contain an explanatory title that would make reference to the text unnecessary.

Figures. These should be numbered with Arabic numerals and should be mentioned consecutively in the text. Legends are to be typed together on a separate sheet.

Illustrations, drawn with a lettering set, should be in finished form ready for photographic reproduction. Lettering on the original drawing should be large enough (minimum, 4 mm) to be legible after reduction to one-third. Graphs should be plotted with black India ink on light blue coordinate paper, no larger than 8.5 × 11 inches, with coordinates properly labeled; grid lines that are to show in the photoreproduction should be inked in black.

Photographs should be submitted as glossy prints and not marred by staples, paper clips, or pencil marks. For best reproduction of halftones, provide clear, sharp photographs with adequate contrast. The best results will be obtained if authors match the contrast and density of all figures appearing on a single plate. If this is not possible, please provide unmounted original art. Providing an overlay that indicates the most critical areas of micrographs will also aid in ensuring high-quality reproduction. The dimensions of the printed page are 5 × 8 in. (127 × 203 mm). It is recommended that micrographs be submitted as near as possible to this size so that large reductions will not be necessary.

Illustrations in color can be accepted only if the authors defray the cost.

Footnotes. These should be designated in the *text* by superscript *numbers* and typed on a separate sheet; in the tables by superscript *letters* and typed at the bottom of the table.

Abbreviations. In general these should follow the usage employed by Chemical Abstracts. The *Style Manual,* 1986, of the American Chemical Society is also an acceptable guide.

References. Citations in the text consist of the author's name, and the year of publication in parentheses. The references should be listed alphabetically and should conform to the following style:

GRAYSON, J., AND LEVESON, M. (1985). Functional and morphological changes in the microcirculation of the dog following acute coronary artery ligation. *Microvasc. Res.* **29,** 161–175.

ALLEN, J. C., AND BUKOSKI, R. D. (1982). Current status of vascular smooth muscle subcellular calcium regulation. *In* "Vascular Smooth Muscle: Metabolic, Ionic, and Contractile Mechanisms" (M. F. Crass III and C. D. Barnes, Eds.), pp. 99–134. Academic Press, New York.

Abbreviations of journal names should follow the style of *Chemical Abstracts Service Source Index*, 1985. Unpublished observations and personal communications should be cited in the *text* as such.

Proofs. Proofs will be sent to the author with a reprint order form. Authors will be charged for alterations in excess of 10% of the cost of composition.

Reprints. Fifty reprints of each article (without covers) will be supplied free of charge. Additional reprints may be ordered. A reprint form will accompany the proofs.

Brief Communications. Preliminary reports will be reviewed for prompt publication; however, the comments must be restricted to no more than five typewritten pages, including references, tables, and illustrations. No abstract should be included.

To facilitate the publication of manuscripts, especially those papers based upon a new, theoretical concept, the Editors invite each contributor to submit the names of at least three scientists who could review the submitted manuscript.
